

Lesson 5	Subject: KS3 Dance Lesson Description: Partner Work – Moving In and Out of the Floor	Learning Outcomes: Students will: - <ul style="list-style-type: none"> • Learn four travelling movements in contact with a partner • Assemble a sequence of movement using new skills • Create their own original combination of movement • Explore transitions, dynamics and pathways 	Suggestions: Time permitting, try to film the student’s own sequences so that you can refer back to these in the plenary lesson.
---------------------	--	---	--

Activity	Description	Objectives	✓	Teaching Points	Resource	Differentiation
Task 1: Push Me, Pull You	See demo mode, Film 1 Students start facing each other. They establish a firm grip holding right wrist-to-wrist, keeping the arms are straight. A step back on the right foot, go through the knees and roll back on to the floor. B lunge forward to your partner, A sit up, find the counterbalance and return to standing. Repeat and swap roles.	To continue to build on forming trust between partners. To build on the counterbalance taught in lesson 2 and show how this can be developed. To teach students a set of movements based on Torsion choreographed Russell Maliphant.		<ul style="list-style-type: none"> - Keep your grip firm, wrist to wrist - Use your weight not your strength - No jerky movements, keep it smooth - Work as a team and trust each other 	Lesson 4 Film 1 (Task 1)	<p>⬆️ Students perform this movement smoothly at various speeds, achieving a clear counterbalance maintaining a 50/50 share of weight.</p> <p>⬇️ Students revisit and work on the counterbalance (lesson 2) before working on this task.</p>

<p>Task 2: Twist and Turn</p>	<p>See demo mode, Film 2 Students in the corner of the space, on the diagonal facing each other. Extend the arms, grip wrist to wrist. A move to the floor, B walk around A as they do a half-turn, staying connected to the floor. Reach an inverted grip; pull up off the floor. Repeat along the diagonal.</p>	<p>To introduce students to a movement used in Russell Maliphant’s Torsion. To continue to grow students’ movement vocabulary to enhance and enrich the creation process.</p>	<ul style="list-style-type: none"> - Maintain a wrist to wrist grip throughout - Pull away from your partner on the diagonal - Keep feet in contact with the floor during the turn - Aim to keep the speed consistent throughout 	<p>Lesson 4 Film 2 (Task 2)</p>	<p>↗ Students complete the movement smoothly and executing the inverted grip. They introduce varying speeds. ↘ Student’s focus on moving to the floor safely. They take pauses during the movement to establish the correct grip and position.</p>
<p>Task 3: One Up, One Down</p>	<p>See demo mode, Film 3 Students in the corner of the space, on the diagonal facing each other. Connect right hands wrist to wrist and left hands above. A move back on the right foot, B overtake A moving them a half-turn away, unfold the arms but maintain the grip. Return to standing, repeat and swap roles.</p>	<p>To develop task two, adding in both arms and developing the inverted grip. Encourage students to focus on smoothness and fluidity when completing the movement. To add another floor based travelling movement that can be used as a transition and travelling step.</p>	<ul style="list-style-type: none"> - Make sure the starting grip is secure - Maintain an equal share of weight - Keep the feet connected to the floor - Try to keep the movement loop smooth 	<p>Lesson 3 Film 3 (Task 3)</p>	<p>↗ Students execute the movement smoothly, adhering to all teaching tips. They start to experiment with speeds and consider how they might change the pathways and direction of the movement. ↘ Students continue to work on task 2 until they feel confident to progress.</p>

<p>Task 4: Roll down to the floor</p>	<p>See demo mode, Film 4 Students start standing next to each other, outside feet touching. Connect the right hands followed by the left. Maintaining the grip, A roll in to face B, out in to the counterbalance. B walk around A as they do a half turn, unfolding the arms as you move. Return to standing with an inverted grip. Release hands, resume original grip and repeat.</p>	<p>To grow and develop the skills developed during the lesson, using the various grips, counterbalance and turns on the floor.</p> <p>To introduce a sophisticated, more advanced movement that can be used to link steps during contact duets.</p>	<ul style="list-style-type: none"> - Ensure the starting grip is correct and secure - Maintain the resistance when lowering your partner to the floor - Work together throughout the task and trust each other - Aim to create fluid movement that loops smoothly 	<p>Lesson 3 Film 4 (Task 4)</p>	<p>↗ Students execute the movement smoothly, adhering to all teaching tips. They start to experiment with speeds and consider how they might change the pathways and direction of the movement.</p> <p>↘ Depending on student's ability, they can revisit task 1, 2 or 3 continuing to work on these until they progress.</p>
<p>Section 2: Building a Sequence</p>	<p>See Section 2, Film 5 Teachers recap the four tasks learnt and ask students to put them together in order: (1,2,3,4).</p>	<p>To show students how individual tasks can be assembled to create a sequence with a partner. To introduce movements learned in previous lessons.</p>	<ul style="list-style-type: none"> - Maintain the correct grips - Establish the counterbalance - Ensure shared participation and a 5-/50 share of weight - Keep the body relaxed - Keep the movements smooth, not disjointed 	<p>Lesson 3: Film 5 (Building a Sequence)</p> <p><i>See also: Inspiration Clip: Torsion</i></p>	<p>↗ Students perform a smooth sequence of movement executing all teaching tips from each task. They start to demonstrate dynamic variation.</p> <p>↘ Students perform all four tasks in order remembering as many of the teaching tips as possible. May need to take more pauses in-between movements.</p>

<p>Section 3: Over to You (creating)</p>	<p>See Section 3, Film 6 Teachers ask students to use all four tasks and create their own sequence of movement putting them together in any order on a diagonal pathway across the room. Students include dynamic range and add extra linking steps (transitions) if they wish.</p>	<p>Students demonstrate creativity, trust, co-operation and problem solving when assembling movement. They use what they have learned during the lesson and from previous lessons, and put it together taking ownership of the process.</p>	<p>-</p>	<p>Lesson 3: Film 6 (Over to You) <i>See also: Inspiration Clip: Torsion</i></p>	<p>↗ Students find way to extend the sequence by adding in transitions like Flavien and Simone do in their version. They think about changing the direction and pathways of the movement, adding in turns and spins and adding dynamic range. Watch the Inspiration Clip and ask students to observe the travelling floor work.</p>
---	--	---	----------	---	--

<p>Assessment: What are we looking for?</p> <ul style="list-style-type: none"> - Focus and concentration - The correct grip for all tasks - Keeping the body connected - Partnership working, co-operation and trust - Smooth and seamless movements - Paying attention to teaching tips 	<p>Things to consider:</p> <ul style="list-style-type: none"> - Feeling self-conscious; working in partners and sharing weight can be daunting – reiterate that if the hand grip and foot positions are correct and the weight share is equal, they can all support any weight. - During the create section, emphasise that there is no correct way of doing this – all movement choices are valid. - Try playing different types of music to help guide dynamic range and offer ideas. 	<p>Discussion and appreciation</p> <p>After section 3 is complete, encourage students to share their short sequences, consider:</p> <ul style="list-style-type: none"> - Which sequences stood out and why? - What did students enjoy about making the sequence and what was challenging? - What suggestions could we give if we were to do it again?
---	---	---

<p>Resources: Filmed lessons that include full examples of each task and section (Select 11-14 category in the resource bank, Lesson 5 and Inspiration Clip 5: Torsion by Russell Maliphant)</p> <p>Access to laptop/whiteboard/projector Suitable space for movement (studio, hall, gym)</p>	<p>SMSC: Social working in teams, building positive relationships between peers, co-operation, trust and communication. Inviting positive discussion and feedback. Introducing students to a professional piece of dance.</p>	<p>Cross-Curricular Links: Maths; sequencing and problem solving, English; communication of subject specific vocabulary and communication between partners.</p> <p>Risk Assessment: Clearing of the space and setting up of equipment at the side of the room</p>
